## ABSTRACT OF THE DISCLOSURE

An economic value is assigned to an individual's contribution to an organization (or a group's contribution to the organization, based on aggregating the contributions of a set of individuals). The valuation metric, called "EVi<sup>TM</sup>" ("Expected Value of the Individual"), represents a measure of human capital value for any individual in an organization. The EVi<sup>TM</sup> measure, when aggregated for an entire organization, becomes a tool for evaluating the performance of the human capital management system.
